Profile

Computer Science student at Rzeszow University of Technology, specializing in cybersecurity and cloud computing. I build projects in software engineering, distributed systems, and infrastructure automation using Go, Python, AWS, and Kubernetes. My interests include cloud computing, DevOps, systems security, IT audit, and technology risk assessment.

Skills

Programming & Data: Go, Python, TypeScript, Shell, SQL; PostgreSQL, TimescaleDB, Redis
Cloud & DevOps: AWS, Kubernetes, Docker, Helm, GitOps, CI/CD, Datadog, Linux, macOS
Systems & Automation: NATS, gRPC, n8n, REST API, systems integration
Data Analysis: MATLAB, Microsoft Excel

Projects

SmartOffer (competition project for AB Bechcicki)
A system that automates B2B proposals and cost estimates for the construction industry. An AI agent processes text and voice inquiries as well as attachments, using vector search across a database of approximately 98,000 products. Business workflows are orchestrated in n8n, the interface is built with Next.js, and the environment runs in Docker on AWS EC2. A team project developed to meet the client's needs.
Technologies: TypeScript, Next.js, n8n, PostgreSQL, pgvector, Docker, AWS EC2

Gix - FX market monitoring system
A distributed system for automatically collecting, aggregating, and monitoring exchange rates published by currency exchange offices across Poland. The Go backend uses NATS JetStream, Redis, and TimescaleDB to process data and serve it to a Gio desktop application. The system is deployed with Kubernetes and Helm and monitored with Datadog. A module for estimating data acquisition costs (FinOps) is in development.
Technologies: Go, Gin, Gio, NATS JetStream, dRPC, Redis, TimescaleDB, Kubernetes, Helm, Datadog

Nequ3D (Master's thesis project)
A platform that processes LiDAR and photogrammetry data into optimized OpenUSD scenes, with NVIDIA RTX NTC texture compression. Its architecture includes an asynchronous Go backend, containerized Python workers, and a Wails application with a local LLM. Workloads are orchestrated with Kubernetes, and infrastructure is managed using GitOps.
Technologies: Go, Python, Docker, Kubernetes, GitOps, OpenUSD, NVIDIA RTX NTC, Wails

Oentike - environmental data analysis system
A system that combines weather and forestry data (Open-Meteo and Poland's Forest Data Bank (BDL)) through scheduled processing and location-based assessment. The Go backend exposes a gRPC API, geospatial data is stored in PostGIS, and the desktop interface is built with Tauri.
Technologies: Go, gRPC, PostgreSQL, PostGIS, Tauri

Experience

Simplicity Games Rzeszow, Poland
Technical Artist November 2024 - January 2025
Optimized 3D models (low-poly assets, LODs, and collision meshes in Blender) and PBR textures to meet Unity's performance requirements.

Education

Rzeszow University of Technology March 2026 - July 2027 (expected)
MSc in Computer Science
Specialization: Cybersecurity and Cloud Solutions

Rzeszow University of Technology October 2022 - February 2026
BEng in Computer Science
Specialization: Business Informatics
Academic projects in data analysis (Python, MATLAB, R), software development, and machine learning, including collaborative software projects. Hackathons: NASA Space Apps Challenge and HackCarpathia. Member of SKNI KOD since 2022.

Languages
